Meerkat

The meerkat (Suricata suricatta) or suricate is a small carnivoran in the mongoose family. It is the only member of the genus Suricata. Meerkats live in all parts of the Kalahari Desert in Botswana, in much of the Namib Desert in Namibia and southwestern Angola, and in South Africa.

Meerkat - Wikipedia

Meerkats (also called suricates) work together in numbers. A few will typically serve as lookouts, watching the skies for birds of prey, such as hawks and eagles, that can snatch them from the...

Meerkat | National Geographic

Meerkat, burrowing member of the mongoose family found in southwestern Africa that is unmistakably recognizable in its upright 'sentinel' posture as it watches for predators. The meerkat is slender and has a pointed little face, tiny ears, and black eye patches.

meerkat | Characteristics, Habitat, Diet, Behavior ...

The Meerkat (Suricata suricatta) is a small member of the mongoose family, which is part of the Feliformia ("cat-like carnivores") order. They are also refered to as suricates, s lender-tailed meerkats and grey meerkats.

Meerkat | Meerkats Wiki | Fandom

A member of the mongoose family, meerkats (also known as suricates) have grizzled gray and brown colored coats of fur with dark patches around their eyes, which help protect their eyes from the glare of the sun. They also have a dark tip on the tail. Meerkats have powerful foreclaws for digging.

Meerkat | Smithsonian's National Zoo

Meerkat definition is - any of several African mongooses; especially : a burrowing highly social primarily insectivorous mammal (Suricata suricatta) of southern Africa that is chiefly grayish with faint black markings and lives in usually large colonies.

Meerkat | Definition of Meerkat by Merriam-Webster

Meerkats belong to the civet and mongoose family. Very small catlike carnivores, their faces often have a curious look, seemingly taking in everything in their surroundings. They have long bodies and short flat ears and are able to stand on their hind legs.

Meerkat - Facts, Diet, Habitat & Pictures on Animalia.bio

Meerkats are a type of mongoose and were once considered to be in the same taxonomic family as genets, civets, and linsangs. Now they are placed in their own family, Herpestidae. Safety in numbers: A "kat" is not a "cat" when it's a meerkat, a vital, clever, and amazing weasel-like animal that is a member of the mongoose family.
